

## Carbon Reduction Plan

Supplier name: **MEYRA UK LTD**

Publication date: Jan 25

### Commitment to achieving Net Zero

MEYRA UK LTD is committed to achieving Net Zero emissions by 2050.

### Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be

<b>Baseline Year: 2026</b>	
<b>Additional Details relating to the Baseline Emissions calculations.</b>	
<p>As a newly established UK entity, we are in the process of establishing our emissions baseline. This is our first baseline year, and emissions data has not yet been calculated.</p> <p>We are fully committed to environmental sustainability and compliance with applicable standards and best practices in emissions monitoring and reduction. We have initiated measures to collect relevant data and will calculate and report emissions in accordance with recognized methodologies going forward.</p>	
<b>Baseline year emissions: 2026</b>	
<b>EMISSIONS</b>	<b>TOTAL (tCO<sub>2</sub>e)</b>
<b>Scope 1</b>	"Not yet calculated – baseline year planned for 2026."
<b>Scope 2</b>	"Not yet calculated – baseline year planned for 2026."
<b>Scope 3 (Included Sources)</b>	"Not yet calculated – baseline year planned for 2026."
<b>Total Emissions</b>	"Not yet calculated – baseline year planned for 2026."

## Current Emissions Reporting

Reporting Year: 2026	
EMISSIONS	TOTAL (tCO <sub>2</sub> e)
Scope 1	Total Scope 1 Emissions: 20.81 tCO <sub>2</sub> e
Scope 2	" Total Scope 2 Emissions: 17.40 tCO <sub>2</sub> e
Scope 3 (Included Sources)	"Not yet calculated – baseline year planned for 2026."
Total forecast Emissions	38.21 tCO <sub>2</sub> e per year.

## Emissions reduction targets

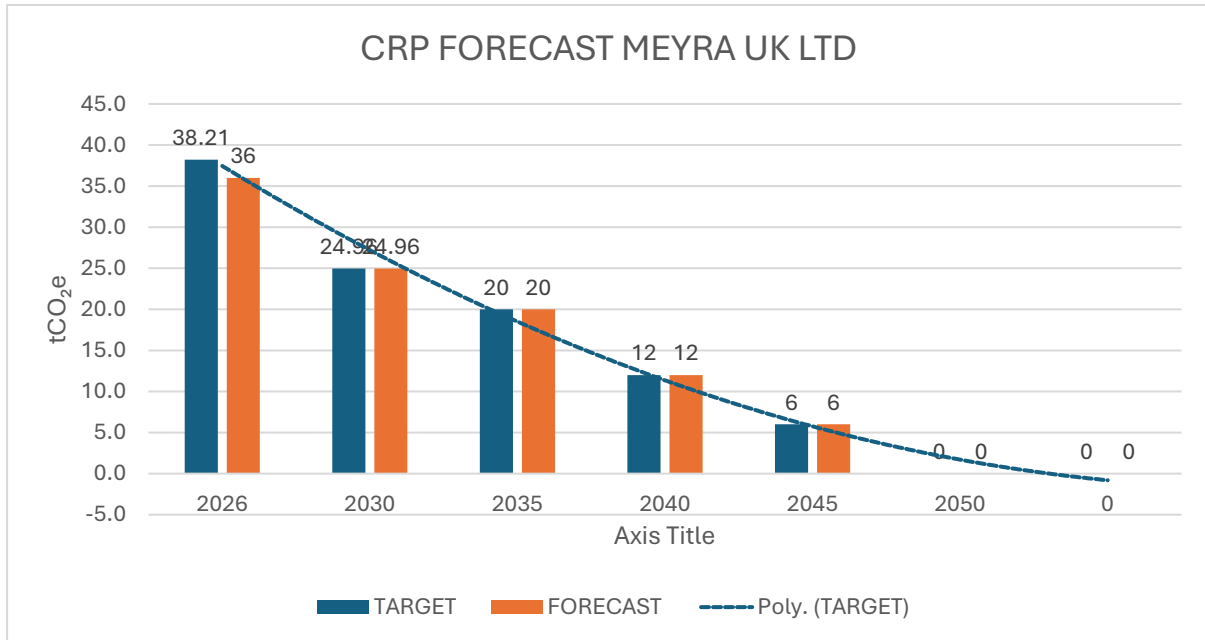

To continue our progress toward achieving Net Zero, we have adopted the following carbon reduction targets based on forecast and projections:

We project that carbon emissions will decrease over the next five years to 24.96 tCO<sub>2</sub>e by 2026. This represents a reduction of 35% from our current emissions baseline of 38.21 tCO<sub>2</sub>e.

These targets are part of our comprehensive carbon reduction strategy, which includes energy efficiency improvements such as the installation of LED lighting, the transition to a hybrid and fully electric vehicle fleet, and the integration of renewable energy sources, such as solar panels, into our operations. We are also committed to a 2% annual reduction in energy consumption, which will help us achieve the overall 10% reduction in emissions by 2026.

These initiatives align with the UK's Clean Growth Strategy and will enable us to reach our long-term goal of a 20% improvement in energy efficiency by 2030. We will continue to monitor and report our progress annually to ensure transparency and keep our actions aligned with industry best practices and evolving environmental goals.

Progress against these targets can be seen in the graph below:

## Carbon Reduction Projects

### Carbon Reduction Projects and Actions for 2026 and Beyond

As a newly established entity, we are committed to recording our annual emissions arising from both our premises and fleet, while continuously improving our processes for accurate emissions tracking and management.

We are dedicated to making consistent improvements in energy efficiency and sustainability. Our organization recognizes the importance of investing in efficient equipment and services to reduce our environmental impact. For example, we plan to implement LED lighting across our office space and identify other energy-saving opportunities in the near future. Additionally, we are actively working to optimize the performance of our fleet, with a goal to transition to electric and hybrid vehicles as part of our long-term strategy.

In the first years of operations, we will focus on identifying and implementing energy conservation measures in our office premises and fleet management. These measures are not only cost-effective but also contribute to significant reductions in carbon emissions. We are aiming for a **10% reduction in emissions by 2026** from our baseline, targeting **2% annual energy consumption reduction** each year.

In addition to implementing lean energy measures, we are planning to invest in green technologies that will further reduce our carbon footprint. These include the installation of renewable energy systems such as solar panels, and the gradual electrification of our fleet, as we move towards a fully hybrid and electric vehicle fleet. These actions align with our long-term commitment to sustainability and the UK's **Clean Growth Strategy for 2030**.

By **2030**, we are aiming for a **20% improvement in energy efficiency**, with efforts coordinated to align with new contracts and leases. Our action plan considers both immediate steps, like lighting upgrades, and longer-term investments in technologies that support both energy savings and behavior changes across the organization.

We will continue to monitor and refine our approach, ensuring that our emissions reduction strategy remains dynamic, cost-effective, and aligned with evolving energy trends and technologies. Our plan to reduce emissions, together with improvements in energy efficiency and fleet electrification, will help us contribute to the UK Government's net-zero goals and align with the latest environmental standards.

#### **Summary of Key Actions:**

- Annual emissions tracking for both premises and fleet.
- Energy efficiency improvements (e.g., LED lighting).
- Fleet transition to hybrid and fully electric vehicles.
- Target of **10% emissions reduction by 2026**, with **2% annual reduction**.
- Investment in renewable energy projects (e.g., solar PV).
- **20% improvement in energy efficiency by 2030**, aligned with UK Government targets.

This approach outlines our commitment to reducing emissions and fostering sustainable practices as part of our long-term strategy for environmental responsibility

#### **Declaration and Sign Off**

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard<sup>1</sup> and uses the appropriate [Government emission conversion factors for greenhouse gas company reporting](#)<sup>2</sup>.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard<sup>3</sup>.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).
